

Dear Mr. Spratt, Dr. Shale and Ms. Chama,

Subject: Radiological Safety Trends (2014-2024)

I hope this email finds you well, kindly see attached my radiological safety and Exposure analysis for the years 2014-2024. This report evaluates a decade of radiological data to assess the efficacy of current safety protocols and the long-term health risks to personnel.

This analysis specifically examines the relationship between workforce growth and individual exposure levels and identifies higher exposure locations. The objective is to provide data driven confirmation of safety compliance and to identify high activity zones requiring sustained oversight.

I am looking forward to discussing the findings of this analysis during our next presentation.

Kind regards,

Elizaberth Mwaba
