

Greetings Darren, Clemens and Dr. Shale.

Please find attached the 2012 US Veteran Compensation report and the accompanying executive summary.

This analysis provides a detailed breakdown of compensation trends across regions, gender, and severity of disability. Specifically, the report aims to

1. Identify and address disparities in gender imbalance.
2. Uncover the regions with the highest total compensation recipients to better understand which regions need more healthcare support.

I would appreciate your review of these findings and look forward to your feedback on both the data insights and the presentation.

Kind regards,

Sarudzai Masiliso.
